

# Commodore Scene Newsletter 001

## **ED Talk**

At long last here is the first newsletter from Commodore Scene.

This newsletter was entirely produced on the Commodore and then printed in full colour from a colour laser printer which is directly connected via a geoCable - that means that EVERYTHING was done on the Commodore ! If you downloaded the PDF version from the CS web site then that will have had some sort of IBM interference, but not too much ;-)

**For the record, here is what is used :**

### Hardware

Commodore 128 DCR (in 64 mode)  
- with internal 1571  
SuperCPU (16mb)  
RAMLink (16mb)  
Hard Drive (4gb)  
ZIP drive (100mb disk)  
FD2000 3.5" disk drive  
geoCable II  
Lexmark Opta C laser printer

### Software

Wheels O/S v 4.4  
PP3  
geoPublish v1.1  
geoDOS v2.94  
& various othe GEOS applications

## **CS Get Together**

During March 2005 (19th & 20th) a group of people (listed below) attended

the first of two 'get togethers' to sort out problems that had been bugging us for some time. The second get together was later in the year to coincide with the visit from Robert Bernardo - more of that in CS2006.

This group meeting was not a usual show that people attended to look at old computers, this was more of a 'workshop' to share ideas, and get problem software to function properly, after all, having two (or more) heads is definately better than having just your own !

### **Attendees :**

Allan Bairstow  
Shaun Bebbington

Wayne Womersley  
Mat Allen  
Nigel Parker  
Andrew Fisher  
Chris Snowden
